SUMMARY — DevOps & Cloud Automation Engineer with hands-on experience across AWS, CI/CD, GitOps, and MarTech automation. Currently building an AI-powered multi-tenant SaaS platform and running production automation and analytics systems at GenLeadAI. Strong foundation in Terraform, Kubernetes, Docker, and DevSecOps, plus end-to-end delivery of client deployments, DNS migrations, and CMS/e-commerce integrations. Gold Medalist (CGPA 9.46), open to full-time DevOps or Cloud Engineer roles.

TECHNICAL SKILLS

Cloud & IaC	AWS (EC2, S3, EKS, IAM, VPC), Terraform, Ansible, Hostinger (VPS, Cloud)
Containers	Docker, Docker Compose, Kubernetes, Helm
CI/CD & GitOps	GitHub Actions, Jenkins, ArgoCD, Git branching strategies
Security	Trivy (FS + Image), SonarQube, RBAC, OAuth 2.0, SPF/DKIM
Languages & Backend	Python, Bash, FastAPI, React, Node.js, MongoDB / MongoDB Atlas, Supabase
Automation & APIs	n8n, Zoho CRM (Automation + API), WhatsApp Business API, Convonite, Meta Ads API, GA4, Resend
Web & CMS	Lovable, Sanity CMS, Shopify (Liquid, Flow), WordPress, DNS management

EXPERIENCE

GenLeadAI **June 2026 – Present**

DevOps, Cloud & MarTech Automation Engineer

- Own end-to-end marketing automation for webinar and lead-nurture campaigns using n8n, Zoho CRM, Convonite, and WhatsApp Business API, running 10+ scheduled workflows reaching 1,000+ leads per cycle.
- Designing the product and backend architecture for ARIA, an AI-powered multi-tenant sales automation SaaS (FastAPI, MongoDB, React) spanning 83 backend modules and 80+ data collections for autonomous lead capture, enrichment, and outreach.
- Built a real-time analytics and automated ROI reporting dashboard integrating Zoho CRM v8 (OAuth 2.0), Meta Ads, and GA4, with fault-tolerant scheduled jobs and auto-emailed reports.
- Migrated a full-stack ops dashboard (React, FastAPI, MongoDB) from a no-code platform to Dockerized self-hosted infrastructure on a VPS; cut query latency from 11s to 0.18s and a key API from 11s to 0.039s (TTL caching), and fixed critical auth and data-integrity bugs.
- Built a Git-based Lovable-to-Hostinger deployment pipeline for 2 production sites with live DNS cutovers, and integrated Sanity CMS with a SEO-safe 301 redirect map.

Freelance DevOps Engineer — Open-Source Contributor **April 2024 – May 2026**

- Built automated CI/CD pipelines (GitHub Actions, Jenkins) with Trivy + SonarQube security scanning, reducing deployment time by 70% and automating 90% of release processes across AWS/EKS deployments.
- Implemented GitOps with ArgoCD for self-healing, zero-touch deployments; provisioned EKS clusters via Terraform for fully repeatable infrastructure.

PROJECTS

DevOpsified Go-Web-App

- Multi-stage Docker builds (distroless) and a 4-stage GitHub Actions pipeline: build/test, lint, Docker push, and auto-update of the Helm chart tag triggering ArgoCD sync.
- **Result:** 50% faster deployments and zero manual deployment steps through full GitOps automation.

CI/CD Pipeline – Blogging App

- 10-stage Jenkins pipeline for Java Spring Boot: compile, test, dual Trivy scanning (FS + image), SonarQube, Nexus artifact publishing, Docker push, and EKS deploy via Terraform + RBAC.
- **Result:** 90% deployment automation with dual-layer security scanning on every release.

Automated Deployment of Scalable Applications on AWS with ArgoCD

- Deployed scalable applications on AWS EC2 with Kubernetes and ArgoCD, using GitOps for automated updates and seamless scaling.
- **Result:** 99.9% uptime, 60% efficiency gain, and zero configuration drift via ArgoCD self-healing.

EDUCATION & ACHIEVEMENTS

Royal Global University, Guwahati **Aug 2018 – Sept 2022**

B.Tech in Computer Science & Engineering — **CGPA: 9.46**

- Gold Medalist, 2022 CSE UG Batch
- Dean's Lister 2021–22
